## **DETAILED ACTION**

### ***Preliminary Amendment***

1. The preliminary amendment filed January 2, 2002 has been entered and considered. An initialed copy of the PTO-1449 by the Examiner is attached.

### ***Priority***

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Drawings***

3. The formal drawings were received on March 7, 2002.

### ***Specification***

The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

#### **Arrangement of the Specification**

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.
- (d) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC (See 37 CFR 1.52(e)(5) and MPEP 608.05. Computer program

Art Unit: 3662

listings (37 CFR 1.96(c)), "Sequence Listings" (37 CFR 1.821(c)), and tables having more than 50 pages of text are permitted to be submitted on compact discs.) or

REFERENCE TO A "MICROFICHE APPENDIX" (See MPEP § 608.05(a). "Microfiche Appendices" were accepted by the Office until March 1, 2001.)

(e) BACKGROUND OF THE INVENTION.

(1) Field of the Invention.

(2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.

(f) BRIEF SUMMARY OF THE INVENTION.

(g) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).

(h) DETAILED DESCRIPTION OF THE INVENTION.

(i) CLAIM OR CLAIMS (commencing on a separate sheet).

(j) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).

(k) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).

***Claim Objections***

4. Claim 22 is objected to because of the following informalities: The claim does not end in a period and appears to be incomplete and confusing since it is not apparent what exactly is being claimed. Appropriate correction is required.

***Claim Rejections - 35 USC § 112***

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

6. Claim 22 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 3662

For the reasons stated in letter paragraph number 4 above, the claim is rejected as being indefinite and unclear as to what is being claimed.

7. Claim 22 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite in that it fails to point out what is included or excluded by the claim language. This claim is an omnibus type claim.

The claim, as best understood in its present form, appears to be possibly omnibus since the claimed "portal" is not defined properly.

8. Claims 1, 15 and 18 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

For claims 1 and 18 it appears that they are indefinite since they do not appear to recite the source of the received millimeter wave radiation. From the specification it appears that there is a transmission of millimeter wave radiation towards the container to be imaged, for example. Thus it would be some sort of reflected millimeter wave radiation that is actually being received and consequently processed to produce an image. The source of the received millimeter wave radiation does not apparently emanate from the contents themselves but seem to be a reflected millimeter wave from a transmitter source. The claim language should reflect this.

For claim 15 it is unclear as to exactly what Applicants mean. Please clarify and/or correct.

***Claim Rejections - 35 USC § 102***

9. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

10. Claims 1-14 and 16-22 are rejected under 35 U.S.C. 102(a) and/or (e) as being clearly anticipated by Sinclair et al ('224 B1) or Toth et al ('141 B1).

The claims, as best understood in their present form, are considered to be clearly met by Sinclair et al ('224 B1) or Toth et al ('141 B1) who show an imaging system including, inter alia, an imager capable of receiving millimeter wave radiation from a "container" and processing the received radiation in order to image the contents of such a container. Clearly the remaining claims are either considered to be shown by the references or are considered to be inherent to the

Art Unit: 3662

disclosed systems in the prior art. For example, a moving container to be imaged, antenna arrays, matching images to various specific contraband that is to be identified, etc.

11. Claims 1-14 and 16-22 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by the article to McMillan et al or Sheen et al ('283) or Pothier ('156).

The claims, as best understood in their present form, are considered to be clearly met by the article to McMillan et al or Sheen et al ('283) or Pothier ('156) who show an imaging system including, inter alia, an imager capable of receiving millimeter wave radiation from a "container" and processing the received radiation in order to image the contents of such a container. For example, a moving container to be imaged, antenna arrays, matching images to various specific contraband that is to be identified, etc.

### ***Conclusion***

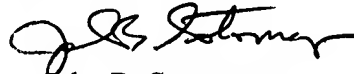

12. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The cited prior art show various object imaging systems.
